WiFi_and_MQTT: attacks

This Folder contains all the original Wi-Fi and MQTT traffic collected in .pcap files. In our study, the pcap files are divided into two groups: "train" and "test". The "train" group is used for ML training, while the "test" group is used to evaluate the ML model. The features of the collected .pcap files are converted to CSV using TCPDUMP, and DPKT (See paper for more details), and are stored under their respective "test", and "train" subdirectories.
